

# Part I

## XY-Plots

### Exercises and Tasks

Sebastian Mies, Elisabeth Dachtler

The screenshot displays a presentation slide titled "DKRZ NCL Tutorial Example: multiple timeseries". The slide is divided into several sections:

- Header:** Features the "NCL" logo on the left and the "DKRZ" logo on the right.
- Title:** "DKRZ NCL Tutorial Example: multiple timeseries" is centered at the top.
- Section 1: XY-Plots**
  - Project:** project name
  - Model:** model
  - 2m temperature**
  - Area mean:** 45.76 42.24
  - Lat:** 24.84 60.28
  - Data:** yearly mean
- Section 2: DKRZ NCL Tutorial Example: xy-plot**
  - A line plot showing "2m temperature K" on the y-axis (ranging from 0 to 10) versus "year" on the x-axis (ranging from 0 to 6). The plot shows a single line with a peak around year 4.
- Section 3: DKRZ NCL Tutorial Example: timeseries plot**
  - A line plot showing "2m temperature K" on the y-axis (ranging from 276.6 to 300.0) versus "Year" on the x-axis (ranging from 1950 to 2100). The plot displays multiple lines representing different data sets (Data 1 to Data 10) and a legend.
  - Legend:**
    - Data 1 (solid green line)
    - Data 2 (dashed green line)
    - Data 3 (solid red line)
    - Data 4 (dashed red line)
    - Data 5 (solid blue line)
    - Data 6 (dashed blue line)
    - Data 7 (solid black line)
    - Data 8 (dashed black line)
    - Data 9 (solid grey line)
    - Data 10 (dashed grey line)
- Section 4: DKRZ NCL Tutorial Example: timeseries plot**
  - A line plot showing "surface temperature" on the y-axis (ranging from 276.6 to 277.5) versus "year" on the x-axis (ranging from 1950 to 2100). The plot displays multiple lines representing different data sets (Data 1 to Data 10) and a legend.
  - Legend:**
    - Data 1 (solid green line)
    - Data 2 (dashed green line)
    - Data 3 (solid red line)
    - Data 4 (dashed red line)
    - Data 5 (solid blue line)
    - Data 6 (dashed blue line)
    - Data 7 (solid black line)
    - Data 8 (dashed black line)
    - Data 9 (solid grey line)
    - Data 10 (dashed grey line)
- Footer:** "Xiao-Meng Duan, DKRZ" is displayed at the bottom left.

Since NCL version 6.2.0 not needed

# Structure of a simple XY-plot script I

```

load "$NCARG_ROOT/lib/ncarg/nclscripts/csm/gsn_code.ncl"
load "$NCARG_ROOT/lib/ncarg/nclscripts/csm/gsn_csm.ncl"

begin
  y = random_uniform(-5, 5, 20)
  wks = gsn_open_wks("x11", "plot_part_I_simple_xy")
  plot = gsn_csm_y(wks, y, False)
end
  
```

Plot formats: X11, PNG, PDF, PS, EPS, SVG, NCGM

Window or plot file name

NCL

### Task: XY-plot script reading data from ASCII file

- Use the script `part_I_XY_read_ASCII_data.ncl`
- Modify:
  - Read data file `ASCII_data_II.asc` column 1 and 2
  - Define x-axis as **time** with 24 integer values
  - Plot data with different line colors (**green, orange**)
  - Make the **lines thicker (=3)**

Hints:

- use `ispan` to create time x-axis
- `xyMonoDashPattern`
- `xyLineThicknessF`
- `xyLineColors`
